Dear Richard

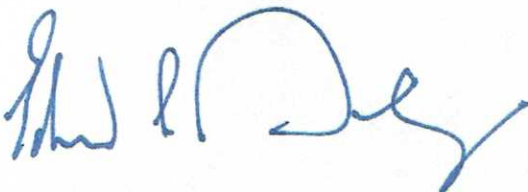

We would like to congratulate you on your Model 14 water making machine. We purchased ours in August 2009. It was installed in our house here in the Bahamas shortly after that and has been producing all our drinking and cooking water since then. It easily keeps up with our needs.

Bottled water here is very expensive and imported water is subject to duty. Most locally available bottled water is produced by reverse osmosis and retails at about \$2.30 per gallon and has to be collected from the grocery store. It is far more convenient to draw the water as required from our water maker in the kitchen!

The concept of producing water with a simple machine located in our own home from air that surrounds us is brilliant.

In addition we would like to thank you and your staff for their help and advice on the few times that we have had to contact them.

Yours sincerely,

Edward Dowty
